Adenosine antagonists can be useful for Parkinson's disease by co-administering with L-3, 4-dihydroxy-phenylalanine (L-DOPA), which is the most popular drug for Parkinson's disease (R. Grondin et al, *Neurology*, 52, 1673-1677 (1999)). So the combination use of the pyridazine compound (I) and a salt thereof of this invention with L-DOPA may be also useful for treatment and/or prevention of Parkinson's disease with decreasing or reducing the side effect such as the onset of dyskinesia eliciting by the long-term application of L-DOPA, and so on.

And additionally, as to a series of the compounds disclosed in our previous patents and patent applications of this field (e.g. WO 99/24424, WO 02/18382, WO 02/100864, WO 03/039451, WO 03/057689, etc.), the combination use with L-DOPA may be also useful same as mentioned above.

The pharmaceutical composition of this invention can be used in the form of a pharmaceutical preparation, for example, in a solid, semisolid or liquid form, which contains the aminopyrimidine compound (I) or a pharmaceutically acceptable salt thereof as an active ingredient in admixture with an organic or inorganic carrier or excipient suitable for rectal, pulmonary (nasal or buccal inhalation), nasal, ocular, external (topical), oral or parenteral (including subcutaneous, intravenous and intramuscular) administrations or insufflation. The active ingredient may be compounded, for example, with the usual non-toxic,

pharmaceutically acceptable carriers for tablets, pellets, troches, capsules, suppositories, creams, ointments, aerosols, powders for insufflation, solutions, emulsions, suspensions, and any other form suitable for use. In addition, auxiliary, stabilizing agents, thickening agents, coloring agents and perfumes may be used where necessary. The aminopyrimidine compound (I) or a pharmaceutically acceptable salt thereof is included in a pharmaceutical composition in an amount sufficient to produce the desired aforesaid pharmaceutical effect upon the process or condition of diseases.

For applying the composition to a human being or an animal, it is preferable to apply it by intravenous, intramuscular, pulmonary or oral administration, or insufflation. While the dosage of therapeutically effective amount of the aminopyrimidine compound (I) varies depending on the age and condition of each individual patient to be treated, in the case of intravenous administration, a daily dose of 0.01 - 100 mg of the aminopyrimidine compound (I) per kg weight of a human being or an animal, in the case of intramuscular administration, a daily dose of 0.1 - 100 mg of the aminopyrimidine compound (I) per kg weight of a human being or an animal, and in case of oral administration, a daily dose of 0.1 - 100 mg of the aminopyrimidine compound (I) per kg weight of a human being or an animal is generally given for the prevention and/or treatment of the aforesaid diseases.

Insoluble material was collected by filtration, washed with water and EtOAc and dried to afford 5-[2-amino-4-(4-fluorophenyl)-6-methoxy-5-pyrimidinyl]-2(1H)-pyridinone (314 mg) as a colorless solid.
